This textbook is perhaps the most unreadable, incomprehensible text I have ever had to attempt to

learn from. The text is full of open statements. The objectives use terminology that is not in the text. The text does not follow a clear outline. It refers to websites that are not functional. A quote from the book: "For whole blood testing, an anticoagulant is mixed with with the whole blood for a minimum of 2 min, and testing must often occur within 1 hour of the blood's being collected. However whole blood testing is usually good for specimens up to 24 h old." So which is it? Is it 1 hour or is it up to 24 hours. And if it is up to 24 hours then why even say, "within 1 hour". If there are specific tests that need to be performed within that first hour and others that can wait up to 24 hours, then say so! I dislike this textbook so much that if any other courses require a text written by Jahangir Moini I will NOT take the course at that institution and seek other educational options such as an online course or a different college.

the book had many anatomical mistakes & for someone going into the medical field using this book as a reference is a big mistake. I would not recommend this book to anyone going into phlebotomy.

This book was required for my Phlebotomy class so I had to buy it. There are numerous mistakes in this book; for example on a diagram of the heart the mitral valve is labeled "tricuspid valve". However it is usable, just be cautious and double check correctness.

The book seem to have a lot of typos and some inaccurate information. My teacher had to correct a lot of the data.

Received it on time and as indicated

Great

Very good book. You learn a lot.

Great thank u
