Lea's Chemistry Of Cement And Concrete, Fourth Edition

Synopsis

Lea's Chemistry of Cement and Concrete deals with the chemical and physical properties of cements and concretes and their relation to the practical problems that arise in manufacture and use. As such it is addressed not only to the chemist and those concerned with the science and technology of silicate materials, but also to those interested in the use of concrete in building and civil engineering construction. Much attention is given to the suitability of materials, to the conditions under which concrete can excel and those where it may deteriorate and to the precautionary or remedial measures that can be adopted. First published in 1935, this is the fourth edition and the first to appear since the death of Sir Frederick Lea, the original author. Over the life of the first three editions, this book has become the authority on its subject. The fourth edition is edited by Professor Peter C. Hewlett, Director of the British Board of Agrement and visiting Industrial Professor in the Department of Civil Engineering at the University of Dundee. Professor Hewlett has brought together a distinguished body of international contributors to produce an edition which is a worthy successor to the previous editions.

Book Information

Paperback: 1092 pages

Publisher: Butterworth-Heinemann; 4 edition (January 29, 2004)

Language: English

ISBN-10: 0750662565

ISBN-13: 978-0750662567

Product Dimensions: 6.8 x 2 x 9.5 inches

Shipping Weight: 5 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars 2 customer reviews

Best Sellers Rank: #970,983 in Books (See Top 100 in Books) #96 in Books > Engineering &

Transportation > Engineering > Materials & Material Science > Concrete #608 in Books >

Textbooks > Engineering > Chemical Engineering #741 in Books > Science & Math > Chemistry

> Physical & Theoretical

Customer Reviews

'In maintaining the currency, calibre continuity and content of the work there is the monumental task of integrating the output of so many individuals into a coherent and comprehensive whole. Peter Hewlett has achieved that successfully....I have little doubt that Frederick Lea himself would have approved,'Professor George Somerville, British Cement Association, UK

A classic reference work which should be on every concrete technologist and cement chemist's bookshelf

Great book and in great condition as reported. Thorough reference on the topic. The seller also processed the order fast which was great.

Together with Neville's Properties of Concrete simply the best books on the subject of cement and concrete.
