# Death By Medicine

## Synopsis

The medical environment has become a labyrinth of interlocking corporate, hospital, and governmental boards of directors, infiltrated by the drug companies. Drug company representatives write glowing articles about pharmaceuticals, which are then signed by physicians paid handsomely for their cooperation, though they may not know the adverse side effects of the drugs they promote. The most toxic substances are often approved first, while milder and more natural alternatives are ignored for financial reasons. It's death by medicine.

## Book Information

## Customer Reviews

With help from a trio of MDs, radio host and alternative medicine advocate Null (Gary Null's Power Food, etc.), takes on the current state of U.S. health care with a controversy-courting sense of moral outrage. Though focused on what the Institute of Medicine (part of the NSA) has called "the nation's epidemic of medical errors," Null also exposes lax regulation at the FDA, and a science-defying bias against natural foods in government and the media in general: "Something is wrong when regulatory agencies pretend that vitamins and nutritional supplements are dangerous." Pushing back against the well-connected pharmaceutical industry, Null pulls from a number of mainstream sources to make a valuable, alarming case that "the American medical system is the leading cause of death and injury in the U.S." Null finds shocking facts hidden in plain sight, such as Senate testimony from a 20-year FDA employee stating that the organization failed to act promptly even in the case of a drug-induced fatality. Null also makes a case against certain common procedures he finds

unnecessary or overprescribed, including chemotherapy, going so far as to suggest that chemotherapy actually causes more cancers to form. Though readers may feel Null going occasionally overboard, anyone with a horse in the health care race is sure to be intrigued and provoked. America's medical system has not only lost its way but has become the leading cause of death and injury in the United States. That shocking assertion is the premise of this compact but explosive book by Gary Null, an award-winning journalist, public radio host, author of wellness books, and strong proponent of alternative medicine and natural healing. Null believes the medical field is in serious need of repair; big corporations and the deep-pocketed pharmaceutical industry have effectively hamstrung government agencies and subjugated much of the medical community through threats and financial incentives. The end result? Not only are people not getting the proper care they deserve, they are dying. In a systematic presentation, the author addresses the plague of needless surgical blunders, negative side effects of corporate drugs, frivolous operations, shameful neglect of the elderly warehoused in rest homes, and research universities' growing dependency on grant money from big business. All of this is done at the expense of preventive forms of healing. Effective, alternative, and traditional types of care are left out of the loop of money and influence. "Many complementary healthcare providers are denied publication through the intervention of pharmaceutical companies," Null writes. "If they or their allopathic colleagues do manage to speak out against corruption in the establishment, they are considered traitors to the medical brotherhood." The author makes effective use of headline-grabbing statistics and shocking anecdotal evidence from a wide range of medical sources, including the Journal of the American Medical Association and numerous researchers of note. References and an index are included. The reader learns that 45 million unnecessary and/or inappropriate antibiotics are prescribed annually. About 8.9 million patients are unnecessarily hospitalized each year. Tons of unused drugs are regularly dumped into the water supply, polluting drinking sources. This book is presented as an exposé, as the title suggests, to reveal cracks in the medical institutions that are killing people. The book is meant to outrage, warn, and light a fire under a citizenry the author hopes will demand reform. Do not look for balance, though. This book does not offer the voices of opposing sides of the argument. Refutations from representatives of "big pharma" won't be found. The author wanted this vehicle to drive home his message. And it certainly does. (January) Karl Kunkel --Foreword Magazine"...Anyone with a horse in the health care race is sure to be intrigued and provoked." --Publishers Weekly --This text

Of course what's written in this book is based on facts. Facts which among other tells us that the bad, wrong, or too much, drugs is the number one killer. That's killing more persons than either cancer or heart attacks. And besides that cancer or heart attacks can be the result of the drugs used. Besides, in the book, we realize how bad many old persons are living in the old people's home, and thereby, among other, that many die to early as the result of bedsores. The book is mostly based on facts about what's actually going on in USA, but as a Danish citizen I know, and can see, that Denmark is fast following suit. So the book is just as good, and important, for warning people living in other countries than USA. That is, if they there not already have it equal, then the historical development, by the biggest chance, with time will result in the getting to the same. Among other we in the book, as started on side 148, are being reminded how scientists once claimed that there weren't enough studies which proved that there were dangers of DDT, and besides, that in 1964, the American Medical Association claimed that there were no prove showing that tobacco could result in lung cancer! And now a days we daily in the news are reading that only the patented drugs cures the sicknesses, versus that the natural medicine, vitamins and minerals, don't work or even are harmful. I would like to live so long that I can hear what we in the future will be told about these patented drugs, like for example the painkiller Vioxx. And in the book, we concerning radiation used for control, we among other read that for a full body having computed tomography, gives the same risk for getting cancer are equal to being within a mile away from a World War II atom bomb explosion! And we are also reminded, which I still recall from when I was a child, that we in the shoe shops could put our feets into a box and there by radioactivity look at their anatomies. And then told that there could be no chance for harm as result of doing this! The reality is that if more persons were reading books like this one, and thereby understanding and learning, then statistically the average age in many countries would rise.

in all dealings relating to medical interventions. Dr. Null did his homework and cut through the smoke screens that people are programmed to believe without question. Unless you are willing to take over your own healthcare, you can become a victim of the "system" that is controlled by Big Pharma and the owners of hospitals and clinics. Too many good doctors are forced to practice "standard of care" that does not result in a great health outcome for many people. A lot of coverups and nonreported reactions and deaths is troublesome. He also clarifies that people do not get sick due to a lack of drugs, or having too many body parts.

It is true that Dr. Gary Null is somewhat of a conspiracy thinker, but his service to mankind can not be dismissed. This book as all of his productions are a necessary read for anyone who ever thinks of being sick. America's Health care is sick and is being controlled by a money hungry cartel which has zero concern for your health or well being. Thank goodness for people like Null. There are many others in this crusade to tell others. A must read.

In general, we all suspect that medicine is somehow not the answer to all our health problems, but it's practically all the mainstream doctors know. This book will confirm your suspicions. If you want to learn the truth about the dangers of medication and the hold the pharmaceutical giants have on our lives, this is a must read. I've read other things Gary Null has written and he always tells it like it is. Books like this should blow the lid off of the very profitable pharmaceutical industry but, in the normal press, it probably won't get many favorable reviews, if any. If you take any medication, this book might save you from a lot of misery and maybe even save your life.

Excellent book, and even a better subliminary DVD that comes with the book. A wakeup call for the medical profession and pharmaceutical industry.

In *Death by Medicine*, Dr. Null lays it out there and basically says "WAKE UP" in no uncertain terms. We have grown complacent about how we take our medications and how much we actually know about the medicines we willingly add to our daily regimens. This book comes with a DVD that is a must watch. I have a very extensive medical background and I found some of the information he puts forth troubling. This book/DVD combo is well worth the cost. Excellent read.

Makes you realize that health is our own responsibility and not that of Big Pharma, Hospitals, or Health Insurance pigs

I just finished this book. It is not for the faint of heart, or people who have a tremendous faith in the drug companies. The author is pretty convincing as he tells about new medications, their untoward effects and sales promotions. ( The truth is that every medication works for someone, and anyone can have unexpected complications from any medication. Medications are two edged swords.) Mr. Null states a pretty good case against the drug companies, but I am reminded that if the companies waited for all untoward effects to reveal themselves through usage by volunteer test patients, the

drugs would never be available to any of us. So I agree and disagree with the author. Between drug companies, insurance companies and the government, the health industry has become very interesting. I do recommend Suffer the Children, a book on Thalidomide, which is along the same vein, and a bit harder to put down,
