Customer Reviews

Ginger Garrett is the author of several nonfiction books for children.

This book uses three examples to illustrate the different states of matter. The author first demonstrates this with water, and then goes on to use a candle and the human body for further clarification. The photos are colorful and well done. The text is simple and direct. I recommend this

for all who want to teach young learners, as well as those who have trouble with language such as ESL students and the mentally disabled. All should be able to learn from this great little book.

The content is great, however nowhere in the product information says it's a VERY small book. It's only maybe 5 x 7 inches...I bought this book for a classroom read-aloud! There would be no way they could see it. It's fine though for students reading at their desk, or a small gift.

Great book for teaching kids

This book gives a very brief intro to the topic. It's a little too basic for the bulk of my third grade students, but will be a good level for struggling third grade readers.

good, simple text

Gives them the info they need without too much detail. Works perfectly for first graders and other lower grades. Only concern is that the book is so small.

Perfect for first graders studying solids and liquids. My students really enjoyed reading this book. Finding informational text that first graders can read is a real treat!

Product arrived as described. Would use seller again.
