I can recall someone was telling in a group chatting, that without the knowledge of c++ there is no programmer, do you think so? I don't call me programmer but to learn coding is something to me that i can't acquire. So i take a chance as Nathan Clark's work is familiar to me and i love his work. So i took this chance to teach my self if can or can't speak on c++. After reading this whole book i can say yes i think i can teach myself to speak in c++ by following this book and i am looking further to read another book filled with different projects to practice what i have learned.
